Orlando, FL • Open to Relocation

SUMMARY OF QUALIFICATIONS

Dynamic Technical Level Designer with a proven track record at Mass Virtual, adept in level design and gameplay systems. Expert in Unity and C#, excelling in complex problem-solving and asset integration, ensuring high-quality game experiences. Collaborated effectively with teams to deliver engaging content that meets project specifications and deadlines.

TECHNICAL SKILLS

Game Design & Development: General Game Design, Complex Problem-Solving, Level Design, Gameplay Systems

Game Engines: Unity, Unreal Engine 5 (UE5)

Programming: C#, Visual Scripting (Unreal Engine Blueprints)

Asset & Systems Integration: Asset Integration, Gameplay System Implementation

Production & Collaboration Tools: Jira, Trello

Languages: English (Fluent), Spanish (Fluent)

EXPERIENCE

• Mass Virtual

Technical Level Designer

Orlando, FL

Mar 2024 - Mar 2025

- Designed, built, and optimized technical levels in Unreal Engine 5, balancing gameplay requirements with hardware, performance, and memory constraints.
- Implemented gameplay and level logic using Unreal Engine Blueprints to support interactive, system-driven experiences.
- Adapted and refactored existing gameplay content to meet evolving project specifications and production requirements.
- Created modular level layouts and integrated assets using engine-native workflows, ensuring visual consistency and technical stability.
- Collaborated cross-functionally with artists, designers, and engineers to resolve technical blockers, identify risks early, and consistently meet production milestones.

• Crystal Dynamics

Associate Designer

Mar 2022 - Mar 2023

- Contributed to live service development for *Marvel's Avengers*, supporting ongoing feature updates and content releases.
- Designed, implemented, and maintained live service gameplay features, ensuring stability and balance across updates.
- Diagnosed and resolved gameplay bugs affecting missions, challenges, and player abilities through systematic debugging and testing workflows.
- Designed and balanced hero-specific challenges across the full playable roster, ensuring consistency and scalability across diverse characters.
- Managed asset integration for playable heroes, validating functionality, data setup, and gameplay balance.
- Created and maintained clear, structured design and technical documentation to support cross-team collaboration.
- Collaborated with designers, engineers, and QA to identify gameplay issues early and support smooth live deployments.

• Black Banshee Studios / Cellec Games

Game Design Intern

May 2020 - Mar 2022

- Designed and implemented gameplay systems across multiple student and independent projects, contributing to core mechanics and player interactions.
- Designed and built multiple levels and puzzle experiences for *Payload*, a game released on Steam.
- Supported asset integration workflows, ensuring correct setup, functionality, and gameplay consistency across projects.
- Assisted with character rigging and asset preparation to support gameplay and animation requirements.
- Produced and maintained structured design and technical documentation to support team collaboration and implementation.

EDUCATION

- **Master Of Science in Game Design**

Fullsail University

- Graduated as **Salutatorian** with Honors

Winter Park, FL

Mar 2022

- **Bachelor Of Science in Game Design**

Fullsail University

- Advanced Achiever Award

- Graduated as **Salutatorian** with Honors

Winter Park, FL

Jun 2020

ACCOMPLISHMENTS

- **Best Student Game — Silv-E Awards (SIEGE)**

2021

Georgia Game Developers Association (GGDA)

- Selected as **Best Student Game** at SIEGE 2021 for *Payload*, recognized among statewide student game development submissions.
